

TURNAROUND TIP SHEET #9

Useful T/ASC® Planning Reports

When planning for a large Turnaround, T/ASC offers you many useful reports:

1. **Scope report** – The scope report is useful to looking at the coding, description and estimates on each activity within the piece of equipment.
2. **Index** – The index is useful for looking at the list of equipment in your file.
3. **Cost** – as the name implies the cost report is used by planner to get an approximate cost of the turnaround items as well as a total cost.
4. **PERT chart** or network diagram – Look at the logic you've created for a piece of equipment.
5. **Related documents** – Look at any docs of spreadsheets or work requests that may have been put in for the equipment
6. **Videos** – If your site security allows video, it's nice to see that equipment as it's operating (or more importantly, **not** operating to spec.)
7. **Pictures** – A picture speaks a thousand words, especially to a planner. Don't forget you can add in unlimited pictures of your equipment!
